

IN THE CLAIMS

Claims 1-40 canceled.

41. (previously presented) In a calibration process for a whiteboard system comprising the steps of (i) providing a whiteboard, (ii) providing a computer, (iii) providing a display device in communication with the computer, (iv) initiating the calibration process, and (v) performing the calibration of positions between the whiteboard and the computer, the improvement comprising the step of initiating the calibration process at a location distant the computer.

42. (previously presented) The improved calibration process of Claim 41, the step of initiating the calibration process at a location distant the computer comprising detecting a touch in proximity to the whiteboard at a predetermined location.

43. (previously presented) The improved calibration process of Claim 41, wherein the calibration process includes the steps of projecting an image onto the whiteboard, detecting a touch at a point on the whiteboard corresponding to the projected image, and calculating a relationship between the touched point on the whiteboard corresponding to the projected image and a position on the display device.

44. (previously presented) The improved calibration process of Claim 42, the touch in proximity to the whiteboard comprising the step of pushing a button.
